## Highlights of Women's Earnings in 2010

### Abstract

[Excerpt] This report presents earnings data from the Current Population Survey (CPS), a national monthly survey of approximately 60,000 households conducted by the U.S. Census Bureau for the U.S. Bureau of Labor Statistics. Information on earnings is collected from one-fourth of the CPS sample each month. Readers should note that the comparisons of earnings in this report are on a broad level and do not control for many factors that can be significant in explaining earnings differences. For a detailed description of the source of the data and an explanation of the concepts and definitions used, see the accompanying technical note.

### Keywords

women, gender, earnings, employment, income inequality, gender gap

# Highlights of Women's Earnings in 2010

U.S. Department of Labor  
U.S. Bureau of Labor Statistics  
July 2011

Report 1031

## Introduction

In 2010, women who were full-time wage and salary workers had median weekly earnings of \$669. Women earned 81 percent of the median weekly earnings of their male counterparts (\$824). In 1979, the first year for which comparable earnings data are available, women earned 62 percent of what men earned. The women's-to-men's earnings ratio has been in the 80 to 81 percent range since 2004; prior to this time, the ratio had been gradually trending upward. (See chart 1 and tables 1 and 12.)

This report presents earnings data from the Current Population Survey (CPS), a national monthly survey of approximately 60,000 households conducted by the U.S. Census Bureau for the U.S. Bureau of Labor Statistics. Information on earnings is collected from one-fourth of the CPS sample each month. Readers should note that the comparisons of earnings in this report are on a broad level and do not control for many factors that can be significant in explaining earnings differences. For a detailed description of the source of the data and an explanation of the concepts and definitions used, see the accompanying technical note.

## Highlights

### Full-time workers

- Median weekly earnings were highest for women age 35 to 64, with little difference between the earnings of 35- to 44-year-olds (\$731), 45- to 54-year-olds (\$730), and 55- to 64-year-olds (\$736). Among men, those age 45 to 64 had the highest earnings, with 45- to 54-year-olds (\$954) making nearly the same as 55- to 64-year-olds (\$979). Young women and men age 16 to 24 had the lowest earnings (\$422 and \$443, respectively). (See table 1.)
- In the four age groupings of those 35 years and older, women had earnings that ranged from 75 to 80 percent of those of their male counterparts. Among younger workers, the earnings differences between women and men were not as great. Women earned 91 percent of what men earned among workers 25 to 34 years old and 95 percent as much as men among 16- to 24-year-olds. (See table 1.)
- Between 1979 and 2010, the earnings gap between women and men narrowed for most age groups. The women's-to-men's earnings ratio among 25- to 34-year-olds, for example, rose from 68 percent in 1979 to 91 percent in 2010, and the ratio for 45- to 54-year-olds increased from 57 percent to 77 percent. The long-term trends for teenagers and for workers age 65 and older fluctuated from 1979 to 2010 but have essentially remained flat. In 2010, the women's-to-men's earnings ratio for teenagers was 95 percent and for women and men age 65 and older it was 76 percent. (See table 12.)
- Asian women and men earned more than their White, Black, and Hispanic counterparts in 2010. Among women, Whites earned 88 percent as much as Asians, while Blacks and Hispanics earned 77 percent and 66 percent as much, respectively. In comparison, White men earned 91 percent as much as Asian men; Black men earned 68 percent as much; and Hispanic men, 60 percent. (See chart 2 and tables 1 and 14.)
- Earnings differences between women and men were widest for Whites and for Asians. White women earned 81 percent as much as their male counterparts in 2010, while Asian women earned 83 percent as much as their male counterparts. By comparison, Hispanic women had earnings that were 91 percent of those of their male counterparts, while Black women earned 94 percent as much as Black men. (See tables 1 and 14.)
- Across the major race and Hispanic ethnicity categories, women's inflation-adjusted earnings grew significantly from 1979 to 2010. Growth in real earnings for White women outpaced that of their Black and Hispanic counterparts. Between 1979 and 2010, inflation-adjusted earnings for White women rose by 33 percent, while earnings grew by 25 percent for Black women and by 15 percent for Hispanic women. In contrast, real earnings for White men edged up by just 2 percent over this period, while earnings for Black men showed no growth, and Hispanic men's earnings fell by 9 percent. (See table 15.) (Asians were not included

in this analysis because comparable data are available only back to 2003. See note in table 15.)

- Median weekly earnings vary significantly by educational level. Among both women and men age 25 and older, the weekly earnings of those without a high school diploma (\$388 for women and \$486 for men) were slightly under 40 percent of those with a bachelor's degree or higher (\$986 for women and \$1,330 for men) in 2010. Women and men with a high school diploma who had not attended college earned a little more than half of what women and men with a bachelor's degree or higher did and those with some college or an associate's degree earned just under 65 percent. (See tables 1 and 6.)
- At each level of education, women have fared better than men with respect to earnings growth. Although both women and men without a high school diploma have experienced declines in inflation-adjusted earnings since 1979, the drop for women was significantly less than that for men: a 9-percent drop for women as opposed to a 31-percent drop for men. On an inflation-adjusted basis, earnings for women with a college degree have increased by 33 percent since 1979, while those of male college graduates have risen by 20 percent. (Data pertain to workers age 25 and older.) (See chart 3 and table 17.)
- Women working full time in management, business, and financial operations jobs had median weekly earnings of \$971 in 2010, more than women earned in any other major occupational category. Within management, business, and finance occupations, women who were chief executives and computer and information systems managers had the highest median weekly earnings (\$1,598 and \$1,415, respectively). The next highest paying job group was professional and related occupations, in which women earned \$900 per week. Within professional and related occupations, women working as physicians or pharmacists had the highest earnings (\$1,618 and \$1,605, respectively). (See table 2.)
- The occupational distributions of female and male full-time workers differ significantly. Compared with men, relatively few women work in construction, production, or transportation occupations, and women are far more concentrated in administrative support jobs. (See chart 4 and table 2.)
- Women are more likely than men to work in professional and related occupations, but they are not as well represented in the higher paying job groups within this broad category. In 2010, only 8 percent of female professionals were employed in the relatively high-paying computer and engineering fields, compared with 43 percent of male professionals. Professional women were more likely to work in education and health care occupations, in which the pay is generally lower than for computer and engineering jobs. Sixty-nine

percent of female professionals worked in the education and health care fields in 2010, compared with 31 percent of male professionals. (See table 2.)

- The ratio of female-to-male earnings varied by state of residence in 2010. The differences in the earnings ratios among the states reflect, in part, variation in the occupations and industries found in each state and in the age composition of each state's labor force. The sampling error for the state estimates is considerably larger than it is for the national estimates; thus, comparisons of state estimates should be made with caution. (See table 3.)
- Median weekly earnings for married women and men were higher than the earnings of those with other marital statuses (never married, divorced, separated, and widowed). As a group, married workers tend to be older than workers with other marital statuses and so are more likely to be in their prime earning years. Workers with other marital statuses were more likely to be under age 25, the age group with the lowest median earnings. (See table 8.)
- Among full-time workers (that is, those working 35 hours or more per week in their sole or principal job), men were more likely than women to have a longer workweek. In 2010, 25 percent of men in full-time jobs worked 41 or more hours per week, while 14 percent of females in full-time jobs worked the same number of hours. Women were more likely than men to work 35 to 39 hours per week: 13 percent as opposed to 5 percent. A large majority of both male and female full-time workers had a 40-hour workweek; among these workers, women earned 87 percent as much as men earned. (See table 5.)

### **Part-time workers**

- Women are more likely than men to work part time—that is, fewer than 35 hours per week in the sole or principal job. Women who worked part time made up 26 percent of all female wage and salary workers in 2010. In contrast, 13 percent of men in wage and salary jobs worked part time. (See table 5.)
- Median weekly earnings of female part-time workers were \$232 in 2010, slightly higher than the \$223 median for their male counterparts. As compared with women, male part-timers were more concentrated in the youngest age groups, which typically have low earnings. Forty-two percent of male part-time workers were 16 to 24 years old, compared with 28 percent of female part-time workers. (See table 4.)

### **Workers paid by the hour**

- Sixty-two percent of women and 56 percent of men employed in wage and salary jobs were paid by the hour in 2010. Women who were paid hourly rates had median

hourly earnings of \$11.83, 86 percent of the median for men paid by the hour (\$13.76). (See tables 9, 10, and 18–21.)

- Among workers who were paid hourly rates in 2010, 7 percent of women and 5 percent of men had hourly earnings at or below the prevailing federal minimum wage of \$7.25. (See tables 11 and 22.)

- Among both women and men, hourly paid workers age 16 to 19 were the most likely to have earnings at or below the minimum wage. In 2010, 25 percent of teenage workers paid hourly rates earned the prevailing federal minimum wage or less, compared with just 4 percent of hourly paid workers age 25 and older. Among 20- to 24-year-olds, 11 percent had earnings at or below the minimum wage. (See table 11.)

<sup>1</sup> Differences in earnings levels between workers with and without union affiliation reflect a variety of factors in addition to coverage by a collective bargaining agreement, including the distribution of male and female employees by occupation, industry, firm size, and geographic region.

<sup>2</sup> Data refer to members of a labor union or an employee association similar to a union.

<sup>3</sup> Data refer to workers who report no union affiliation but whose jobs are covered by a union or an employee association contract, as well as to members of a labor union or an employee association similar to a union.

NOTE: Estimates for the race groups listed (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. Persons whose ethnicity is identified as Hispanic or Latino may be of any race.

Elevator installers and repairers.....	32	( <sup>1</sup> )	( <sup>1</sup> )	( <sup>2</sup> )
Fence erectors.....	30	( <sup>1</sup> )	( <sup>1</sup> )	( <sup>2</sup> )
Hazardous materials removal workers.....	32	( <sup>1</sup> )	( <sup>1</sup> )	( <sup>2</sup> )
Highway maintenance workers.....	99	729	45	( <sup>2</sup> )
Rail-track laying and maintenance equipment operators.....	12	( <sup>1</sup> )	( <sup>1</sup> )	( <sup>2</sup> )

See footnotes at end of table.

Table 2. **Median usual weekly earnings of full-time wage and salary workers, by detailed occupation and sex, 2010 annual averages—Continued**

Occupation	Both sexes			Women		
	Number of workers (in thousands)	Median weekly earnings	Standard error of median	Number of workers (in thousands)	Median weekly earnings	Standard error of median
Septic tank servicers and sewer pipe cleaners.....	12	( <sup>1</sup> )	( <sup>1</sup> )	-	-	-
Miscellaneous construction and related workers...	30	( <sup>1</sup> )	( <sup>1</sup> )	2	( <sup>1</sup> )	( <sup>1</sup> )
Derrick, rotary drill, and service unit operators, oil, gas, and mining.....	38	( <sup>1</sup> )	( <sup>1</sup> )	1	( <sup>1</sup> )	( <sup>1</sup> )
Earth drillers, except oil and gas.....	18	( <sup>1</sup> )	( <sup>1</sup> )	-	-	-
Explosives workers, ordnance handling experts, and blasters.....	9	( <sup>1</sup> )	( <sup>1</sup> )	-	-	-
Mining machine operators.....	60	\$996	\$97	2	( <sup>1</sup> )	( <sup>1</sup> )
Roof bolters, mining.....	4	( <sup>1</sup> )	( <sup>1</sup> )	-	-	-
Roustabouts, oil and gas.....	10	( <sup>1</sup> )	( <sup>1</sup> )	-	-	-
Helpers—extraction workers.....	6	( <sup>1</sup> )	( <sup>1</sup> )	-	-	-
Other extraction workers.....	48	( <sup>1</sup> )	( <sup>1</sup> )	1	( <sup>1</sup> )	( <sup>1</sup> )
Installation, maintenance, and repair occupations.....	4,120	794	8	152	\$683	\$20
First-line supervisors/managers of mechanics, installers, and repairers.....	365	964	33	26	( <sup>1</sup> )	( <sup>1</sup> )
Computer, automated teller, and office machine repairers.....	231	804	20	23	( <sup>1</sup> )	( <sup>1</sup> )
Radio and telecommunications equipment installers and repairers.....	155	916	28	16	( <sup>1</sup> )	( <sup>1</sup> )
Avionics technicians.....	18	( <sup>1</sup> )	( <sup>1</sup> )	2	( <sup>1</sup> )	( <sup>1</sup> )
Electric motor, power tool, and related repairers...	25	( <sup>1</sup> )	( <sup>1</sup> )	-	-	-
Electrical and electronics installers and repairers, transportation equipment.....	4	( <sup>1</sup> )	( <sup>1</sup> )	-	-	-
Electrical and electronics repairers, industrial and utility.....	18	( <sup>1</sup> )	( <sup>1</sup> )	-	-	-
Electronic equipment installers and repairers, motor vehicles.....	10	( <sup>1</sup> )	( <sup>1</sup> )	-	-	-
Electronic home entertainment equipment installers and repairers.....	39	( <sup>1</sup> )	( <sup>1</sup> )	-	-	-
Security and fire alarm systems installers.....	50	904	34	1	( <sup>1</sup> )	( <sup>1</sup> )
Aircraft mechanics and service technicians.....	129	980	41	4	( <sup>1</sup> )	( <sup>1</sup> )
Automotive body and related repairers.....	126	682	17	1	( <sup>1</sup> )	( <sup>1</sup> )
Automotive glass installers and repairers.....	17	( <sup>1</sup> )	( <sup>1</sup> )	-	-	-
Automotive service technicians and mechanics...	595	675	19	11	( <sup>1</sup> )	( <sup>1</sup> )
Bus and truck mechanics and diesel engine specialists.....	300	767	16	1	( <sup>1</sup> )	( <sup>1</sup> )
Heavy vehicle and mobile equipment service technicians and mechanics.....	216	879	23	3	( <sup>1</sup> )	( <sup>1</sup> )
Small engine mechanics.....	41	( <sup>1</sup> )	( <sup>1</sup> )	1	( <sup>1</sup> )	( <sup>1</sup> )
Miscellaneous vehicle and mobile equipment mechanics, installers, and repairers.....	78	521	21	-	-	-
Control and valve installers and repairers.....	22	( <sup>1</sup> )	( <sup>1</sup> )	-	-	-
Heating, air conditioning, and refrigeration mechanics and installers.....	311	824	29	3	( <sup>1</sup> )	( <sup>1</sup> )
Home appliance repairers.....	33	( <sup>1</sup> )	( <sup>1</sup> )	1	( <sup>1</sup> )	( <sup>1</sup> )
Industrial and refractory machinery mechanics....	417	858	26	14	( <sup>1</sup> )	( <sup>1</sup> )
Maintenance and repair workers, general.....	300	693	22	9	( <sup>1</sup> )	( <sup>1</sup> )
Maintenance workers, machinery.....	28	( <sup>1</sup> )	( <sup>1</sup> )	1	( <sup>1</sup> )	( <sup>1</sup> )
Millwrights.....	43	( <sup>1</sup> )	( <sup>1</sup> )	2	( <sup>1</sup> )	( <sup>1</sup> )
Electrical power-line installers and repairers.....	118	1,087	42	1	( <sup>1</sup> )	( <sup>1</sup> )
Telecommunications line installers and repairers..	150	863	38	12	( <sup>1</sup> )	( <sup>1</sup> )
Precision instrument and equipment repairers.....	53	914	40	8	( <sup>1</sup> )	( <sup>1</sup> )
Coin, vending, and amusement machine servicers and repairers.....	28	( <sup>1</sup> )	( <sup>1</sup> )	1	( <sup>1</sup> )	( <sup>1</sup> )

See footnotes at end of table.

With children under 6 years.....	1,054	565	16
With no children under 18 years.....	19,415	659	4

<sup>1</sup> Includes never-married, divorced, separated, and widowed persons.

NOTE: Children refer to "own" children and include sons, daughters, stepchildren, and adopted children. Excluded are other related children such as grandchildren, nieces, nephews, and cousins, as well as unrelated children. Data for 2010 reflect improved methodology that provides more accurate estimates of the number of mothers and fathers and, as a result, are not strictly comparable with data for earlier years.

<sup>1</sup> Differences in earnings levels between workers with and without union affiliation reflect a variety of factors in addition to coverage by a collective bargaining agreement, including the distribution of male and female employees by occupation, industry, firm size, and geographic region.

<sup>2</sup> Data refer to members of a labor union or an employee association similar to a union.

<sup>3</sup> Data refer to workers who report no union affiliation but whose jobs are covered by a union or an employee association contract, as well as to members of a labor union or an employee association similar to a union.

NOTE: Workers paid hourly rates represented 59 percent of all wage and salary workers in 2010. Estimates for the race groups listed (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. Persons whose ethnicity is identified as Hispanic or Latino may be of any race.

Hispanic or Latino ethnicity.....	12,977	462	360	822	6.3
Women.....	5,503	261	207	468	8.5
Men.....	7,474	201	154	355	4.7
FULL- AND PART-TIME STATUS AND SEX <sup>1</sup>					
Full-time workers.....	52,803	1,039	595	1,634	3.1
Women.....	24,229	595	340	935	3.9
Men.....	28,574	444	255	699	2.4
Part-time workers.....	19,994	1,496	1,220	2,716	13.6
Women.....	13,123	998	807	1,805	13.8
Men.....	6,871	498	413	911	13.3

<sup>1</sup> The distinction between full-time and part-time workers is based on hours usually worked. These data do not sum to totals because full-time or part-time status on the principal or main job is not identifiable for a small number of multiple jobholders.

NOTE: The prevailing federal minimum wage was \$7.25 in 2010. (See Technical Note for more information about minimum wage workers.) Estimates for the race groups listed (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. Persons whose ethnicity is identified as Hispanic or Latino may be of any race.

<sup>1</sup> The comparability of historical labor force data has been affected at various times by methodological and conceptual changes in the Current Population Survey (CPS). For an explanation, see the Historical Comparability section of the Household Data technical documentation provided at [www.bls.gov/cps/eetech\\_methods.pdf](http://www.bls.gov/cps/eetech_methods.pdf).

<sup>1</sup> The comparability of historical labor force data has been affected at various times by methodological and conceptual changes in the Current Population Survey (CPS). For an explanation, see the Historical Comparability section of the Household Data technical documentation provided at [www.bls.gov/cps/eetech\\_methods.pdf](http://www.bls.gov/cps/eetech_methods.pdf).

NOTE: As of 2003, estimates for the race groups listed (White, Black or African American, and Asian) include persons who selected that race group only; persons who selected more than one race group are not included. Prior to 2003, persons who reported more than one race were included in the group they identified as the main race. Persons whose ethnicity is identified as Hispanic or Latino may be of any race. Asian data for 2000–2002 are for Asians and Pacific Islanders. As of 2003, Asians constitute a separate category. Data for Asians were not tabulated prior to 2000. Dash indicates data not available.

<sup>1</sup> The comparability of historical labor force data has been affected at various times by methodological and conceptual changes in the Current Population Survey (CPS). For an explanation, see the Historical Comparability section of the Household Data technical documentation provided at [www.bls.gov/cps/eetech\\_methods.pdf](http://www.bls.gov/cps/eetech_methods.pdf).

NOTE: As of 2003, estimates for the race groups listed (White, Black or African American, and Asian) include persons who selected that race group only; persons who selected more than one race group are not included. Prior to 2003, persons who reported more than one race were included in the group they identified as the main race. Persons whose ethnicity is identified as Hispanic or Latino may be of any race. Asian data for 2000–2002 are for Asians and Pacific Islanders. As of 2003, Asians constitute a separate category. Data for Asians were not tabulated prior to 2000. Dash indicates data not available. The Consumer Price Index research series using current methods (CPI-U-RS) is used to convert current dollars to constant dollars. (See Technical Note.)

<sup>1</sup> The comparability of historical labor force data has been affected at various times by methodological and conceptual changes in the Current Population Survey (CPS). For an explanation, see the Historical Comparability section of the Household Data technical documentation provided at [www.bls.gov/cps/eetech\\_methods.pdf](http://www.bls.gov/cps/eetech_methods.pdf).

NOTE: The Consumer Price Index research series using current methods (CPI-U-RS) is used to convert current dollars to constant dollars. (See Technical Note.)

<sup>1</sup> The comparability of historical labor force data has been affected at various times by methodological and conceptual changes in the Current Population Survey (CPS). For an explanation, see the Historical Comparability section of the Household Data technical documentation provided at [www.bls.gov/cps/eetech\\_methods.pdf](http://www.bls.gov/cps/eetech_methods.pdf).

<sup>1</sup> The comparability of historical labor force data has been affected at various times by methodological and conceptual changes in the Current Population Survey (CPS). For an explanation, see the Historical Comparability section of the Household Data technical documentation provided at [www.bls.gov/cps/eetech\\_methods.pdf](http://www.bls.gov/cps/eetech_methods.pdf).

NOTE: As of 2003, estimates for the race groups listed (White, Black or African American, and Asian) include persons who selected that race group only; persons who selected more than one race group are not included. Prior to 2003, persons who reported more than one race were included in the group they identified as the main race. Persons whose ethnicity is identified as Hispanic or Latino may be of any race. Asian data for 2000–2002 are for Asians and Pacific Islanders. As of 2003, Asians constitute a separate category. Data for Asians were not tabulated prior to 2000. Dash indicates data not available.

<sup>1</sup> The comparability of historical labor force data has been affected at various times by methodological and conceptual changes in the Current Population Survey (CPS). For an explanation, see the Historical Comparability section of the Household Data technical documentation provided at [www.bls.gov/cps/eetech\\_methods.pdf](http://www.bls.gov/cps/eetech_methods.pdf).

NOTE: As of 2003, estimates for the race groups listed (White, Black or African American, and Asian) include persons who selected that race group only; persons who selected more than one race group are not included. Prior to 2003, persons who reported more than one race were included in the group they identified as the main race. Persons whose ethnicity is identified as Hispanic or Latino may be of any race. Asian data for 2000–2002 are for Asians and Pacific Islanders. As of 2003, Asians constitute a separate category. Data for Asians were not tabulated prior to 2000. Dash indicates data not available. The Consumer Price Index research series using current methods (CPI-U-RS) is used to convert current dollars to constant dollars. (See Technical Note.)

Table 22. **Wage and salary workers paid hourly rates with earnings at or below the prevailing federal minimum wage, by sex, 1979–2010 annual averages**

<sup>1</sup> The comparability of historical labor force data has been affected at various times by methodological and conceptual changes in the Current Population Survey (CPS). For an explanation, see the Historical Comparability section of the Household Data technical documentation provided at [www.bls.gov/cps/eetech\\_methods.pdf](http://www.bls.gov/cps/eetech_methods.pdf).

<sup>2</sup> Data for 1990–91, 1996–97, and 2007–09 reflect changes in the minimum wage that took place in those years.

NOTE: The prevailing federal minimum wage was \$2.90 in 1979, \$3.10 in 1980, and \$3.35 in 1981–89. The minimum wage rose to \$3.80 in April 1990, to \$4.25 in April 1991, to \$4.75 in October 1996, to \$5.15 in September 1997, to \$5.85 in July 2007, to \$6.55 in July 2008, and to \$7.25 in July 2009. (See Technical Note for more information about minimum wage workers.)

## Technical Note

The estimates in this report were obtained from the Current Population Survey (CPS), which provides a wide range of information on the labor force, employment, and unemployment. The survey is conducted monthly for the U.S. Bureau of Labor Statistics (BLS) by the U.S. Census Bureau, using a national sample of about 60,000 households, with coverage in all 50 states and the District of Columbia. The earnings data are collected from one-fourth of the CPS monthly sample.

Material in this report is in the public domain and may be used without permission. This information is available to sensory-impaired individuals upon request. Voice telephone: (202) 691-5200; Federal Relay Service: 1-800-877-8339.

### Concepts and definitions

The principal concepts and definitions used in connection with the earnings data in this report are described next.

*Usual weekly earnings.* Data are collected on wages and salaries before taxes and other deductions, and include any overtime pay, commissions, and tips usually received (at the principal job in the case of multiple jobholders). All self-employed workers are excluded, both those with incorporated businesses and those with unincorporated businesses. Prior to 1994, respondents were asked how much they usually earned per week. Since January 1994, respondents have been asked to identify the easiest way for them to report earnings (hourly, weekly, biweekly, twice monthly, monthly, annually, or other) and how much they usually earn in the period reported. Earnings reported on a basis other than weekly are converted to a weekly equivalent. The term “usual” is as perceived by the respondent. If the respondent asks for a definition of “usual,” interviewers are instructed to define the term as “more than half the weeks worked during the past 4 or 5 months.”

*Medians (and other quantiles) of weekly earnings.* Most of the earnings estimates shown in this report are medians. The median (or upper limit of the second quartile) is the amount that divides a given earnings distribution into two equal groups, one having earnings above the median and the other having earnings below the median. Ten percent of workers in a given distribution have earnings below the upper limit of the first decile (90 percent have higher earnings), 25 percent have earnings below the upper limit of the first quartile (75 percent have higher earnings), 75 percent have earnings below the upper limit of the third quartile (25 percent have higher earnings), and 90 percent have earnings below the upper limit of the ninth decile (10 percent have higher earnings).

The BLS estimating procedure for determining the median of an earnings distribution places each reported or calculated weekly earnings value into a \$50-wide interval that is centered around a multiple of \$50. The median is estimated through the linear interpolation of the interval in which the median lies.

Over-the-year changes in the medians (and other quantile boundaries) for specific groups may not necessarily be consistent with the movements estimated for the overall quantile boundary. The most common reasons for this possible anomaly are as follows:

- There could be a change in the relative weights of the subgroups. For example, the medians of both 16- to 24-year-olds and those 25 years and older may rise, but if the lower earning 16-to-24 age group accounts for a greatly increased share of the total, the overall median could actually fall.
- There could be a large change in the shape of the distribution of reported earnings, particularly near a quantile boundary. This change could be caused by survey observations that are clustered at rounded values—for example, \$300, \$400, or \$500. An estimate lying in a \$50-wide centered interval containing such a cluster, or “spike,” tends to change more slowly than one in other intervals. Consider, for example, the calculation of the median for a multi-peaked distribution that shifts over time. As such a distribution shifts, the median does not necessarily move at the same rate. Specifically, the median takes relatively more time to move through a frequently reported earnings interval, but once above the upper limit of such an interval, it can move relatively quickly to the next frequently reported interval. BLS procedures for estimating medians (and other quantile boundaries) mitigate such irregular movements of the measures; however, users should be cautious of these effects when evaluating short-term changes in the medians and in ratios of the medians.

*Constant dollars.* The Consumer Price Index research series using current methods (CPI-U-RS) is used to convert current dollars to constant dollars. BLS has made numerous improvements to the Consumer Price Index (CPI) over the years. Although these improvements make the CPI more accurate, the official histories of price index series are not adjusted to reflect the improvements. Because many researchers need a historical series that measures price change consistently over time, BLS developed the CPI-U-RS to provide an estimate of the CPI that incorporates most of the methodological improvements made since 1978 into the entire series. (For further information, see Kenneth J. Stewart and Stephen B. Reed, “CPI research series using current methods, 1978–98,” *Monthly Labor Review*, June 1999, on the Internet at <http://www.bls.gov/opub/mlr/1999/06/art4full.pdf>; and “Questions and Answers: Consumer Price Index Research Series Using Current Methods,” on the Internet at <http://www.bls.gov/cpi/cpirsdc.htm>.)

This report uses the most recent version of the CPI-U-RS available at the time of production. Users should note, however, that the CPI-U-RS is subject to periodic revision. As a result, the rate of inflation incorporated into the constant-dollar earnings estimates in this report may differ from that in previous reports in this series or in other publications.

*Wage and salary workers.* These are workers who receive wages, salaries, commissions, tips, payment in kind, or piece rates. The group includes employees in both the private and public sectors but, for purposes of the earnings series, excludes all self-employed persons, both those with incorporated businesses and those with unincorporated businesses.

*Full-time workers.* For the purpose of producing estimates of earnings, workers who usually work 35 hours or more per week at their sole or principal job are defined as working full time.

*Part-time workers.* For the purpose of producing estimates of earnings, workers who usually work fewer than 35 hours per week at their sole or principal job are defined as working part time.

*Workers paid by the hour.* Historically, workers paid an hourly wage have made up approximately three-fifths of all wage and salary workers. Workers paid by the hour are included in the full- and part-time worker tables in this report, along with salaried workers and other workers not paid by the hour. Data for workers paid at hourly rates are presented separately in tables 9 to 11 and 18 to 22.

*Workers paid at or below the federal minimum wage.* The estimates of the numbers of workers with reported earnings at or below the federal minimum wage in tables 11 and 22 pertain only to workers who are paid hourly rates. Salaried workers and other workers who are not paid by the hour are not included, even though some have earnings that, if converted to hourly rates, would be at or below the minimum wage. Consequently, the estimates presented in this report likely understate the actual number of workers with hourly earnings at or below the minimum wage. Research has shown, however, that the degree of understatement is small. BLS does not routinely estimate the hourly earnings of workers not paid by the hour because of data quality concerns associated with such an estimation process.

The prevailing federal minimum wage was \$2.90, effective January 1, 1979; \$3.10, effective January 1, 1980; \$3.35, effective January 1, 1981; \$3.80, effective April 1, 1990; \$4.25, effective April 1, 1991; \$4.75, effective October 1, 1996; \$5.15, effective September 1, 1997; \$5.85, effective July 24, 2007; \$6.55, effective July 24, 2008; and \$7.25, effective July 24, 2009. Data for 1990–91, 1996–97, and 2007–09 reflect changes in the minimum wage that took place during those years. Note that some states

have established minimum-wage standards that exceed the federal level.

The presence of workers with hourly earnings below the minimum wage does not necessarily indicate violations of the Fair Labor Standards Act, because there are a number of exemptions to the minimum-wage provisions of the law. In addition, some workers might have rounded their hourly earnings in response to survey questions. As a result, some might have reported hourly earnings below the minimum wage when, in fact, they earned the minimum wage or higher.

## **Reliability**

Statistics based on the CPS are subject to both sampling and non-sampling error. Whenever a sample, rather than an entire population, is surveyed, there is a chance that the sample estimates may differ from the “true” population values they represent. The exact difference, or sampling error, varies with the particular sample selected, and this variability is measured by the standard error of the estimate. There is about a 90-percent chance, or level of confidence, that an estimate based on a sample will differ by no more than 1.6 standard errors from the true population value because of sampling error. BLS analyses generally are conducted at the 90-percent level of confidence. Estimates of earnings and their standard errors can be used to construct approximate confidence intervals, or ranges of values, that include the true population value with known probabilities.

The CPS data also are affected by nonsampling error. This kind of error can occur for many reasons, including the failure to sample a segment of the population, inability to obtain information on all respondents in the sample, inability or unwillingness of respondents to provide correct information, and errors made in data collection or processing.

For a full discussion of the reliability of data from the CPS and for information on estimating standard errors, see the “Reliability of the estimates” section of Household Data technical documentation on the Internet at [http://www.bls.gov/cps/eetech\\_methods.pdf](http://www.bls.gov/cps/eetech_methods.pdf).
